

Simple Governance Solutions for Complex Governance Challenges

Integrated Programme Management

From the conception of an idea, through the promotion of demand, to the realisation of benefits and orchestration of all the important elements of governance and forecasting in between, PRIMED was created with reporting efficiency and transparency at its heart.

PRIMED engenders a structured approach, whilst promoting collaboration and whatever the programme involves, enables all the many interrelated variables to be aggregated, tracked and monitored in unity throughout a programme's lifecycle.

PRIMED helps companies deliver with agility, govern with transparency, prioritise with certainty and in a world of change, where change is the only constant, lay down a platform upon which to pivot and respond quickly with confidence.

PRIMED for Programme Insight and Governance

PRIMED captures all the information required to maintain a complete aggregated picture of the current and forecasted financial and strategic impact of change, and at the same time tracks the key dependencies and granular detail required to maintain a clear understanding of a programme's health.

Demand Management

PRIMED captures all the information required to maintain a complete aggregated picture of the current and forecasted financial and strategic impact of change, and at the same time tracks the key dependencies and granular detail required to maintain a clear understanding of a programme's health.

Supporting a disciplined and objective approach to the surfacing and promotion of demand, PRIMED breaks down the qualification process into discrete stages, for which minimum requirements can be set before the opportunity is allowed to move forward in the process.

PRIMED enables stakeholders to converse within the platform to validate and qualify the merit of an opportunity using a consistent dimension based scoring methodology.

The result is an efficient and transparent process for which only viable projects with the greatest potential benefit, and with all the necessary information required for ongoing governance, attract the necessary focus and investment.

Integrated Resource Management

Integrated resource management facilitates efficient budgeting, dynamic prioritisation, cost analysis and resource balancing. Supporting different rate cards and with the ability to track resources by skill, type or geography it can operate discretely or in conjunction with other resource management platforms.

Scenario Planning

Scenario Planning enables the dynamic impact assessment of different plan designs at the same time as providing the ability to dynamically re-forecast costs, benefits and strategic impacts as timescales move and new information becomes available.

Reporting

Information can be reported in the context of Strategy, Line of Business, Territory or a multitude of other variables, to enable a clear picture of progress to be derived from multiple perspectives and at different levels of granularity from the same single data set.

Organisational Context

PRIMED captures organisational structure and accountability enabling each stakeholder to access only information relevant to them. A RACI framework records information about key responsibilities for projects, programmes, assets, processes, contracts, policy and regulation to improve governance and promote better collaboration.

Risks and Remediation Management

Importantly, risks are always reported by type and severity, in a structured format with the detail of their programmatic and business context. This enables all relevant parties to maintain a clear view of how a risk might relate to other elements of the programme and for stakeholders to remain informed and engaged in the process of remediation.

Asset Management

PRIMED captures critical detail about assets, the plans and contracts that are associated with them, the organisation that they belong to and any critical regulations that may apply.

Document Management

Documents can be uploaded or attached to many different elements within PRIMED; which can be helpful when plans, photographs, diagrams or contracts need to be appropriately shared.

With PRIMED, you can

- Map your oversight
- See the convergence points
- Rationalise and Automate
